

Zone of Theoretical Visibility (ZTV) has been generated using Environment Agency 1m Lidar Digital Terrain Model (DTM). The DTM was resampled to a cell size of 2m. These models do not take into account the screening effect of vegetation, buildings and other structures. Existing buildings have been incorporated into the DTM from OS MasterMap and OS Vector Map Local, both with an assumed height of 7.5m. Woodland has been incorporated into the DTM from the National Forest Inventory (NFI) and National Tree Map (NTM) with assumed heights of 12m and 4m respectively. The ZTV is based upon a grid of points at 50m intervals within the developable solar PV areas with assumed maximum height of 3.5m, with an observer eye height of 1.6m. All heights mentioned are above ground level (AGL) unless otherwise specified.
